

THE TRUST PROBLEM

Every Purchase Is Ultimately Based on Trust

What Trust Means ...

Trust in the Product

- Quality
- Safety
- Suitability

Trust in the Brand

- Reputation
- Values
- Reliability

Trust in the Information

- Accuracy
- Completeness
- Transparency

A purchasing decision depends on all three.

Introducing TrustShelf

A transparent platform that brings product information together in one place

TrustShelf addresses the challenge of fragmented product information by aggregating, enriching, and organizing data into a single transparent view.

TrustShelf

MAKE BETTER BUYING DECISIONS

Search any product to understand its environmental, social and ethical impact before you buy.

How TrustShelf Works

The Challenge

Product information exists across many different databases and platforms, making it difficult for consumers to get a complete and trustworthy view.

Our Solution

TrustShelf aggregates, enriches, and organizes information into a single transparent view that helps consumers make informed decisions

How We Measure Trust

TrustShelf combines multiple product indicators while remaining transparent about data quality.

Trust Score

82 / 100

Trust Score = What the data tells us

Confidence Score

91%

Confidence increases when:

- ✓ More trusted labels are available
- ✓ EcoScore data is available
- ✓ Multiple sources agree
- ✓ Brand information is available

Confidence Score = How much data supports that conclusion

TrustShelf: The Path Forward

Current Limitations

- Governance and ethics data depend on available sources
- Limited coverage for Open Products Facts
- Brand-company matching is not always accurate

Future Enhancements

- Additional ESG datasets
- More robust company matching
- Coverage beyond Germany
- More advanced NLP-based controversy detection

Thank you!
